At **TransMagic** our primary focus is developing high quality multi-CAD interoperability solutions. Regardless of your position in the manufacturing industry, most likely 3D CAD data plays a critical role. The design to manufacturing process commonly utilizes ten or more different 3D applications. The ability to reuse CAD data, from any source, can have a positive impact on sales, delivery schedules and ultimately profitability. With TransMagic you can efficiently move CAD data to any downstream application. TransMagic provides the easiest and most reliable way for manufacturing professionals to reuse 3D data in any CAD/CAM/CAE application.

Why Not Just Use IGES or STEP?

3D modeling software is popular because design data can sometimes be reused in other stages of the manufacturing process. However, these software products have proprietary file formats which are incompatible with each other. Many people rely on IGES or STEP files to get 3D solid models from one application into another. This practice adds considerable delays as these "standard" formats typically require extensive rework to be usable. File translation roadblocks can cause project delays, tie up valuable engineering resources and increase costs.

"TransMagic saves us a lot of money. We don't have to buy licenses for a lot of different CAD software."
C. Diltz, Grede Foundries, Inc.

Maximum Data Exchange Efficiency

TransMagic reads proprietary CAD files in their native formats. Powerful Repair tools condition models to optimize data exchange quality. This new way of working with 3D CAD files results in much greater efficiency and higher data integrity, virtually eliminating time consuming rework. TransMagic wastes no time. The intuitive user interface allows engineers and even non-CAD experts to start file translation projects within minutes of installation. Our customers claim that TransMagic has saved them hours, days and even weeks on all kinds of manufacturing projects.

The Easiest Way to Translate 3D CAD Files

TransMagic Value Proposition

- High Translation Quality
- Automated Geometry Repair
- Rich Viewing Options
- Frequent CAD Updates
- Scalable
- Easy to Use

TransMagic... Innovation - Scalability - Flexibility

No CAD Software Required!

TransMagic products offer an independent bridge between all 3D CAD/CAM/CAE systems. This means there is no need to purchase and maintain additional CAD programs or high cost licenses that rarely get used. TransMagic routinely updates its software to ensure it keeps pace with current CAD software releases. It's no mystery that TransMagic provides an outstanding return on investment.

State of the Art File Repair Technology

Just as all CAD software products have different file types, they also have very different ways of representing 3D geometry. When models are opened in other applications these differences show up as gaps, missing surfaces or surfaces that don't fit the part; clearly not the original design intent. These files could become unusable surface models instead of "solids."

TransMagic's unique Repair technology, quickly and easily makes adjustments to condition models and eliminates those problems before files are translated. Since this problem is so wide spread and can cost companies so much lost time and money, TransMagic includes Automated Geometry Repair technology with every product.

Rapid Return of Investment

Manufacturing engineers and designers who use TransMagic can increase their productivity and save their organizations valuable time and money. With an intuitive interface, automated repair functions and universal compatibility, TransMagic provides its customers with fast, easy to use, high quality 3D CAD translations.
